### FOR IMMEDIATE RELEASE

#### **Youth Leading the Way, Climate Restoration and The Path Back to 300PPM**

#### ***Over Thirty Youth Leaders to Highlight Importance of Climate Restoration Projects, Advocacy and Education at Climate Restoration Youth Summit***

This year at COP27, youth will have their largest presence ever at the largest annual meeting on climate action. Youth are increasingly at the forefront of the climate change movement and are making their voices heard and are driving negotiations and policy changes on the global stage. A growing number of youths have realized the necessity of climate restoration and are calling for greater attention to climate restoration projects' potential to restore greenhouse gas levels to those last seen on Earth over a century ago, by 2050 (below 300ppm).

**What:** Over 30 youth delegates from around the world will participate in a youth leadership summit focused on climate restoration and the path back to 300ppm. In addition to a comprehensive briefing on the state of climate restoration, youth attendees will be split into task groups to discuss climate restoration advocacy and awareness, education and the Climate Restoration Network, a global decentralized network of Climate Restoration Centers.

**When:** Tuesday, November 8, 7:00pm – 9:00pm CAT (Central Africa Time)

**Where:** The Climate Restoration Villa, Sharm, COP27  
Directions to the villa will be provided in response to your RSVP

This event will be immediately followed at 8pm CAT by a global broadcast by the youth summit leadership through the following Zoom link (RSVP needed):

<https://us06web.zoom.us/meeting/register/tZcode6hrDkoHNYeP5gvEdA0DGvUOPsy0SH6>

**Who:** Climate Restoration Youth Summit Leadership and key event speakers

Why: While youth generally support the protocols for reducing carbon emissions laid out in the Paris Accords, they believe that these are only a first step, and not remotely sufficient in themselves to secure a healthy future for our species. Climate restoration can restore a safe and healthy climate (with CO<sub>2</sub> below 300ppm) when deployed at scale. Youth are at the forefront of educating key stakeholders about and advocating for the potential of climate restoration projects.

**To RSVP for the event and for additional information:**
